EDUCATION

2021-2026
Cankaya University
Software Engineering
Bachelor of Science

LANGUAGES

Good Level English
Beginner Level German

SKILLS

- MySQL
- HTML-CSS
- Javascript
- React
- Node.js
- Java
- Swift
- C
- C++
- Unity
- Python
- Process Modeling (UML, Flowcharts, BPMN)
- SRS / SDD Preparation
- Requirements Gathering & Documentation
- Work Breakdown Structure (WBS)
- Use Case & User Story Creation
- Agile & Scrum Methodologies

ABOUT ME

I am a recent Software Engineering graduate from Çankaya University with a strong focus on Business Analysis and Product Development. I bridge the gap between complex technical requirements and business objectives by leveraging my hands-on experience in requirement analysis, user story mapping, and workflow visualization.

My technical background is diverse, ranging from Web Development with React to Mobile Development using Swift (iOS & watchOS). Recently, I have been developing a Software Test Automation System for Helicopter Display Units in collaboration with TUSAŞ, where I apply NLP and Agile methodologies to streamline critical verification processes.

I am eager to contribute to real-world projects as a Software Engineer, bringing a unique blend of analytical thinking and cross-platform technical expertise.

EXPERIENCES

07.2024 - 08.2024
Simtek Simulation Technologies
Software Development
Internship

During my internship at Simtek, I worked in the software development department, primarily using C++. I contributed to simulation-based projects and developed functionalities such as undo/redo operations and a Minesweeper game logic as part of internal tools. This experience helped me improve my problem-solving skills and gain hands-on experience with object-oriented programming and version control tools like Git.

07.2025 - 08.2025
Mastersoft
Software Development
Internship

During my internship at Mastersoft, located in Hacettepe Teknokent, I contributed to the LogAI project, which focuses on anomaly detection in log data using machine learning and deep learning algorithms. My tasks primarily involved frontend development with React, where I designed and implemented the Contact Form and About Us pages, and contributed to the LogAI product promotion website. I also researched the Elasticsearch system, explored its integration potential, and connected to the project's database environment. Additionally, I actively participated in weekly meetings held on Tuesdays and Fridays, where I presented my progress and received feedback. Through this internship, I enhanced my technical knowledge in React, Git workflow, and log management systems, while also gaining insights into teamwork, project management, and the importance of scalable software architectures.

PROJECTS

Pet Vaccination and Health Tracking System May 2025

–A web-based system that helps pet owners track vaccination schedules, veterinary visits, and health checkups. Solves issues like missed vaccinations and inaccessible health records.

–Technologies: HTML, CSS, JavaScript, React, Node.js, MySQL

Food Recognition AI Training Apr 2025

–Python-based image classification project that trains models to recognize various food types, useful for dietary tracking or smart meal logging applications.

–Technologies: Python, TensorFlow, Keras, OpenCV

MyBazar – Java-Based Marketplace Simulation Dec 2024

–A standalone Java project that simulates the logic of a basic marketplace system with product listing and user interaction via the console.

–Technologies: Java (OOP, Console UI)

Child & Parent Task/Wish Management System Nov 2024

–A Java project that allows children to list tasks and wishes while parents monitor them. Solves basic household communication without requiring a database.

–Technologies: Java (OOP, File I/O)

Text Editor Simulator (Undo/Redo Feature) Aug 2024

–Simulates a simple text editor that supports undo and redo operations, addressing the need for reversible editing functionality.

–Technologies: C++, STL (Stack, Vector)

Weather App Website Feb 2025

–A responsive weather forecasting website using real-time API data to deliver accurate weather updates. Designed for simplicity and usability.

–Technologies: HTML, CSS, JavaScript, OpenWeatherMap API

Helicopter Display Unit (HDU) Test Automation System (TUSAŞ LIFT UP - Graduation Project)

Oct 2025 – Present

–A desktop-based test automation platform for Helicopter Display Systems featuring NLP-based commands and a voice assistant.

Designed with a PyQt5 GUI to manage complex display test scenarios and integrated with Pytest for automated functional verification of cockpit interfaces.

–Technologies: Python, Pytest, NLP, PyQt5, Speech-to-Text Integration

Water Reminder (iOS & Apple Watch App) March 2026

–A cross-platform hydration tracking application designed for both iOS and Apple Watch. Features a seamless user experience for logging water intake, personalized daily goals, and real-time synchronization between devices using specialized frameworks.

–Technologies: Swift, SwiftUI, WatchKit, UserNotifications, HealthKit

Cursor Hackathon – AI-Powered Language Learning App Prototyping | Teknopark Ankara (October 2025)

During a time-constrained hackathon, I designed the architecture and developed a functional prototype of an AI-powered foreign language learning mobile application, actively utilizing the Cursor AI IDE and modern development tools.

I leveraged prompt engineering and Cursor’s features to accelerate AI integration and UI development; through teamwork and an agile approach, I successfully prepared the project for demonstration.
